

it's what we do

Retrofit Best Practice

What: Silverado Junction – YESCO Las Vegas

Night Patrol! Night Patrol! Night Patrol! This mantra proved itself once again to the Service experts at YESCO Las Vegas. When the outage came in, Taylor Lamb, the Service Account Executive wasted no time getting the order to a technician in the field to make the hasty repair.

Upon inspection, YESCO notified the customer of the legacy parts inside of the sign and the great expense it would be to make the repairs. A retrofit was going to be the most energy-saving solution.

YESCO came to the rescue by providing the customer with a leased retrofit package that included the pylon, expensive to maintain soffit lighting as well as the property's maintenance agreement. The customer was able to brighten their image utilizing financing through YESCO and ended up paying less for the project monthly than they had been for maintenance.
